

IMPORTANT INFORMATION FOR CONSULTANTS

As a consultant, you would be only too aware of the need for high quality manufacturers and contractors to be used on the projects you are working on. The last thing you want is to have companies coming back to you and asking why there are problems with the HVAC systems once the project is commissioned.

Many consultants are now recommending our products and listing them in the project specifications as they are aware that we do not take shortcuts in the manufacturing process.

We always recommend the correct and safest options rather than a cheap, quick fix which can cause problems down the track.

Thermal Electric Elements produces a range of quality heating products for various industries and are the leaders in the design and manufacture of new and existing heating technologies.

We use the most energy efficient options and heaters, assisting in the construction of greener buildings and minimising the carbon footprint of any project.

One of our areas of expertise is in the HVAC arena, where we manufacture a range of electric duct heaters, full duct inserts, evapodry trays and VAV units.

We have enclosed a sample of our range of products and would be happy to help you with any technical advice you require. We can also provide you with samples of our products to inspect and we can have a representative call on you should you wish.

We hope this information has been helpful to you. If you would like further information on Thermal's capabilities and products, please do not hesitate to contact us on the details below.
